

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (currently amended): A multiple layered non-PVC containing tubing comprising:

a first layer of a polymer blend composed of: (a) from about 25% to about 50% by weight of the first layer of a first polyolefin selected from the group consisting of polypropylene and polypropylene copolymers, (b) from about 1 to about 50% by weight of the first layer of a second polyolefin selected from the group consisting of ethylene copolymers, ultra-low density polyethylene, polybutene, polybutadiene and butene ethylene copolymers; (c) from about 1% to about 40% by weight of the first layer of a radio frequency susceptible polymer selected from the group consisting of polyamides, ethylene acrylic acid copolymers, ethylene methacrylic acid copolymers, polyimides, polyurethanes, polyesters, polyureas, ethylene vinyl acetate copolymers with a vinyl acetate comonomer content from 12%-50% by weight of the copolymer, ethylene methyl acrylate copolymers with methyl acrylate comonomer content from 12%-40% by weight of the copolymer, ethylene vinyl alcohol copolymer with vinyl alcohol comonomer content from 12%-70% by mole percent of the copolymer; (d) from about 1% to about 40% of a first thermoplastic elastomer; and

a second layer disposed coaxially within the first layer and being a second thermoplastic elastomer composed solely of a styrene and diene copolymer.

Claim 2 (original): The tubing of claim 1 wherein the polyamide is selected from a group consisting of aliphatic polyamides resulting from the condensation reaction of diamines having a carbon number within a range of 2-13, aliphatic polyamides resulting from a condensation reaction of di-acids having a carbon number within a range of 2-13, polyamides resulting from the condensation reaction of dimer fatty acids, and amide containing copolymers.

Claim 3 (original): The tubing of claim 1 wherein the polyamide is a dimer fatty acid polyamide.

Claim 4 (previously presented) The tubing of claim 1 wherein the first polyolefin is a propylene copolymerized with a monomer selected from the group consisting of α -olefins having from 2-17 carbons.

Claim 5 (original): The tubing of claim 4 wherein the first polyolefin is a propylene and ethylene copolymer having an ethylene content of from about 1% to about 8% by weight of the first polyolefin.

Claims 6-10 (canceled)

Claim 12 (previously presented): The tubing of claim 1 wherein the second thermoplastic elastomer has a polymer structure selected from the group consisting of diblock, triblock, radial block, and star block.

Claim 13 (previously presented): The tubing of claim 12 wherein the second thermoplastic elastomer is selected from the group consisting of styrene-ethylene-butene-styrene copolymers and styrene-isoprene-styrene copolymers

Claim 14 (original): The tubing of claim 13 wherein the second thermoplastic elastomer contains styrene-ethylene-butene-styrene diblock copolymer and a styrene-ethylene-butene-styrene triblock copolymer.

Claim 15 (original): The tubing of claim 1 wherein the second polyolefin is an ethylene copolymerized with a monomer selected from the group consisting of α -olefins.

Claim 16 (original): The tubing of claim 15 wherein the ethylene and α -olefin copolymer is obtained using a single-site catalyst.

Claims 17-18 (canceled)
